

Dynamic circuit vs post-selected comparison — ibm_torino ($N_{\text{shots}} = 10,000/\text{basis}$)

Post-selected: $F = 0.8365$, Dynamic: $F = 0.7465$, Shot-cost ratio: $4.19\times$

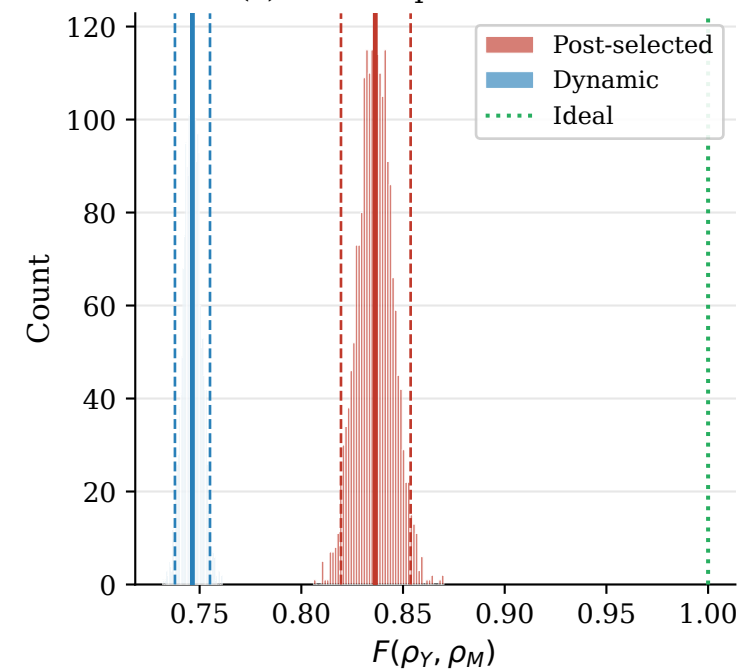

(a) Fidelity comparison

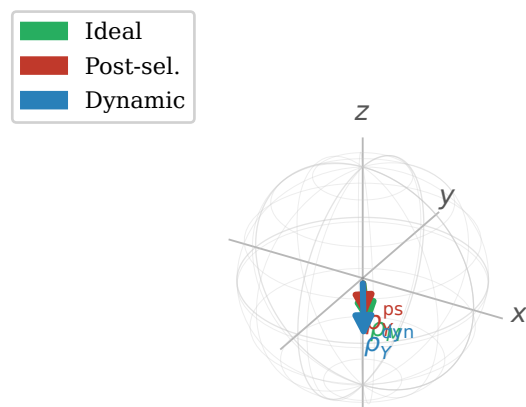

(b) Shot-cost tradeoff

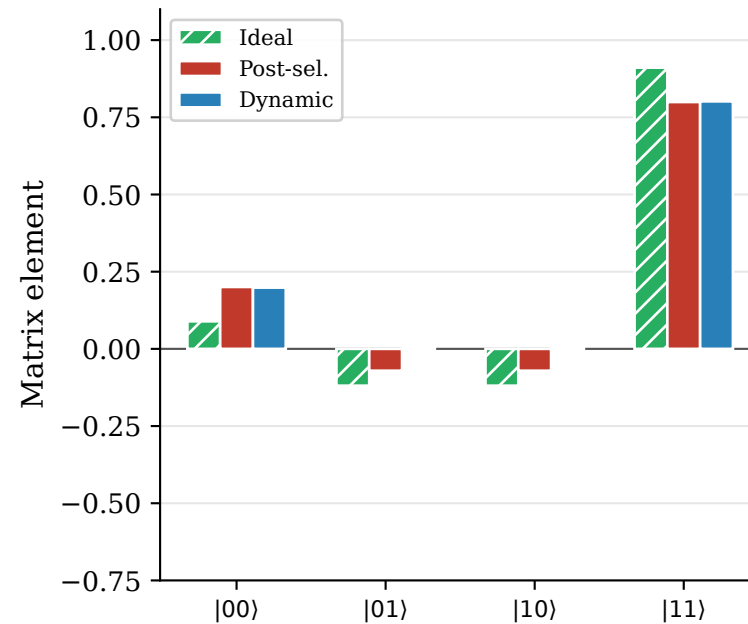

(c) Bootstrap distributions

(d) Bloch sphere

(e) $\text{Re}(\rho_Y)$

(f) $\text{Im}(\rho_Y)$
