

Loschmidt echo $g_{\theta\theta}$ measurement — ibm_torino
HW fit: $g_{\theta\theta}=0.24230$ [0.23716,0.24404], analytical: $g_{\theta\theta}=0.23579$ ($\Delta=+0.00651$)

(a) Echo P_{00} vs δ

(b) $g_{\theta\theta}$ per- δ estimate
(should be flat = constant)

(c) Bootstrap distribution
 $\Delta g = +0.00651$
